Summary

Informatics graduate from Udayana University with experience in manual software testing and web and mobile application development. Experienced in identifying bugs, reporting test results, and providing feedback on functionality and user experience. Developed full-stack development skills using React.js, React Native, TypeScript, Node.js, Express.js, PostgreSQL, and Prisma ORM through intensive training and independent projects.

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, PHP, Dart.

Frontend and Mobile: React.js, React Native, HTML, CSS, Flutter, Expo.

Backend: Node.js, Express.js, RESTful API.

Databases and ORM: PostgreSQL, MySQL, Prisma ORM.

Testing: Manual Testing, Functional Testing, bug identification and reporting.

Development Tools: Git, GitHub, Postman, Visual Studio Code, phpMyAdmin.

Other: WordPress.

Work Experience

PT DumbWays Indonesia Teknologi — Sawangan, West Java

Full Stack Developer | *Internship*

August 2026 – October 2026

• Participated in an internship structured as an intensive, project-based training program covering programming fundamentals, JavaScript, TypeScript, algorithms, and problem-solving.

• Gained practical experience in web and mobile development using React.js and React Native, including frontend integration with RESTful APIs.

• Learned backend development using Node.js and Express.js, along with PostgreSQL database design and data access using Prisma ORM.

PT Twosee Media Teknologi — East Jakarta

QA Tester | *Contract: September 2025 – July 2026*

QA Tester | *Internship: March 2025 – August 2025*

• Performed manual testing on company applications, including AI prompting applications, to evaluate feature functionality and user experience.

• Identified and reported bugs, performance issues, and usability problems to the development team.

• Provided feedback based on test findings to support improvements to application features and user interfaces.

• Created user interface prototypes using Flutter (Dart), including layouts, navigation, and visual elements based on team guidance.

• Assisted with website development and ran full-stack applications to investigate bugs identified during testing.

Dinas Komunikasi dan Informatika Kabupaten Badung — Badung, Bali

Web Developer | *Internship*

October 2023 – December 2023

• Assisted in designing, developing, and testing web applications based on the agency's requirements.

• Collaborated with the team to gather and analyze user requirements to support application development.

• Supported application maintenance, including bug fixes and feature improvements.

• Provided technical assistance to application users within the agency.

Projects

BarberBro — Barbershop Management Application

Independent Developer | *October 2026 – November 2026*

GitHub: github.com/RadiV22/barbershop-management-app

• Independently developed BarberBro, including the backend, web interface, and mobile application, to support barbershop operations.

• Implemented service, customer, barber, and order management, along with payment recording.

• Built user authentication, service status transitions, and order search and filtering features.

• Integrated the web and mobile applications with the backend and built a dashboard displaying an operational summary.

Technologies: React.js, React Native, TypeScript, Node.js, Express.js, PostgreSQL, Prisma ORM, Expo, Axios.

Education

Udayana University — Bali

Bachelor's Degree in Informatics (S.Kom.)

August 2018 – November 2024

GPA: 3.69 / 4.00

Undergraduate Thesis: Classification of Distributed Denial of Service (DDoS) Attacks Using Support Vector Machine with Correlation-Based Feature Selection.

• Developed a DDoS attack classification prototype using Python and Support Vector Machine (SVM) on the CSE-CIC-IDS2018 dataset.

• Applied Correlation-Based Feature Selection (CFS) to reduce the number of features from 68 to 31, achieving approximately 99–100% accuracy in research testing with no substantial decrease compared with using all features.
